Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17-20,23-26 and 31 are rejected under 35 U.S.C. 102(b) as being anticipated by Walker et al. (4,014,371). Walker discloses a method of transferring springs (5) into holding means (11) of an assembler (2) comprising delivering springs (5) in a conveying direction (left to right in fig. 2) by means of a spring conveyor (4) one behind the other in a row to a position on table (1) on a side of the assembler (2) and displacing the springs perpendicularly to the conveying direction by a sliding bar (6) which transfers the springs into the assembler. Fig. 2 shows that the sliding bar (6) has pusher blades which transfer the springs and then move out of a region of the conveyor (4) after transfer. Fig. 3 shows that the sliding bar is moved in a slotted track.

Claims 17,19,21,22,23,25 and 27-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Zangerle (4,413,659). Zangerle discloses a method of transferring springs (3) into holding means (25) of an assembler (7) comprising delivering springs (3) in a conveying direction from coiling machines (1,2) by means of a spring conveyor (4) one behind the other in a row to a position on a side of the assembler (7). The springs are lifted by gripping beam (21) and the beam is displaced perpendicularly to the conveying direction by a sliding bar (31) which transfers the springs into the

assembler. The sliding bar (31) movement is shown in fig. 2 to be along a curved path as link arm (31) is swung during a rotation of crank (28) and journal (29).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
